SUMMARY

Software Engineer with 6+ years of experience building scalable, cloud applications using Java, Spring Boot, React and Kubernetes. Proven track record delivering end-to-end solutions that drive measurable impact, achieved 40% performance improvements through cloud migration and 35% faster issue resolution via ML automation. Expert in designing robust APIs, implementing security compliance, and optimizing system observability across AWS and Azure.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java, Python, Spring Boot, TypeScript, JavaScript, JUnit, Node.js, Angular, React
- **Cloud & DevOps:** Kubernetes, AWS, Azure, Docker, Helm, Jenkins, Git, HashiCorp Vault
- **Database:** SQL, MySQL, PostgreSQL, MongoDB, Oracle Application Server, PL/SQL, Redis
- **APIs & Security:** REST, SOAP, SAML, OIDC, OAuth

WORK EXPERIENCE

Fidelity Investments

May 2023 - Present

Software Engineer

- Engineered Azure AD authentication pipeline with OIDC workflows, enforcing identity security controls, significantly reducing unauthorized access while meeting 100% of corporate security standards.
- Built ML powered incident response chatbot on AWS using Python and NLP models, improving query resolution time by 35%.
- Migrated a critical production application from AWS ECS to EKS, leveraging Kubernetes for auto scaling and resource management to achieve a 40% performance boost and enhanced fault tolerance.
- Established unified observability platform by integrating Splunk telemetry streams with Datadog dashboards, reducing MTTD by 40% and enabling real-time KPI tracking for security operations.
- Implemented RBAC security controls in SSO management application using Spring Boot microservices, reducing security incidents by 25% through granular access enforcement and real-time policy validation.
- Deployed centralized audit logging pipeline for REST APIs capturing security events and access patterns, enabling analysis and compliance monitoring across distributed cloud infrastructure.

Fidelity Investments

Jul 2022 - Dec 2022

Software Engineer Intern

- Created Helm charts for packaging and versioning Kubernetes applications to facilitate efficient deployment, rollback, and scalability, which increased development velocity by 30%.
- Integrated HashiCorp Vault secrets management pipeline, securing credential rotation workflows and reducing vulnerability exposure by 40% through automated secret lifecycle management.
- Developed over 15 REST APIs in Spring Boot to accelerate customer transaction processing by automating key operations and reducing manual efforts by 20%.
- Optimized REST API performance by applying Redis based data caching in a distributed application, reducing database query load and enhancing response times by 25%.
- Automated Kubernetes deployments using Jenkins CI/CD and Docker for containerization, streamlining the pipeline, cutting deployment time by 50%, and enhancing system reliability.

KPIT Technologies Ltd.

Feb 2018 - Aug 2021

Software Engineer

- Developed multiple Eclipse-RCP plugins using Java and SWT for an integrated subsystem, automating test case creation and significantly boosting team productivity.
- Built data analytics platform using Python and PostgreSQL to process Git commits data, analyzing 100K+ code changes to identify security patterns and reduce code review cycles by 30%.
- Engineered full-stack monitoring application using React, Node.js, PostgreSQL, and Python processing real-time productivity metrics, improving team operational efficiency by 40% through data-driven insights and alerting dashboards.

EDUCATION

Northeastern University

Sep 2021 - May 2023

Master of Science, Information Systems

- **GPA:** 3.8
- **Coursework:** Data Science Engineering Methods, Web Development Tools and Methods, Design Patterns, Advanced Big Data Applications and Indexing Techniques, Agile Software Development

Cummins College of Engineering for Women

May 2013 - Jun 2017

Bachelor of Engineering, Computer Engineering
